# Underground Bunkers

## Strength Where It Counts!

Rising S Steel Bunkers and Bomb Shelters are built from high quality plate steel and structural metals on the market today. This makes the entire underground shelter extremely rigid and strong, unlike shelters from many of our competitors. No matter how and where pressure is applied; the steel exoskeleton frame used in our engineering adds tremendous strength to the structure while distributing weight and pressure across the entire structure. There is no chance of a structural “weak spot” and these bunkers will not collapse under weight or unexpected changes in the earth.

# Quality That Lasts For Generations

---

When treated with 150 year rubber coating, steel has very little maintenance issues and last much longer than the other options. It will not crack, collapse, mildew or mold. Steel will expand and contract with the ground, not crack like concrete or fiberglass. There is no 3 ft hill eye sore in your yard. It sits below the earth's surface. We can build it to your exact specifications, making it as comfortable as your living room. In a situation that calls for your family to take refuge in a shelter, you don't want to worry about mold, mildew or possible collapse. You want the safest and least problematic shelter, and that is why our steel shelters are the best option. If you are interested in learning more about the underground bunkers, or Bomb shelters see this page.

Raw steel is the only material that goes into the construction of our bunkers and shelters. No wood to mold or rot... no sheet rock, no plastic. Every internal wall, door and beam is made from steel. Each of these walls contributes greatly in adding additional internal strength to the unit. Rising S bunkers won't twist, bend or torque with shifting ground. We make one of the only earthquake -safe shelters on the market. There is nothing stronger and nothing better.

## Layout Customization

---

Every Bunker/Bomb Shelter we build is constructed with one primary thing in mind... the client! We pride ourselves on our fabrication abilities and we offer each customer the opportunity to customize the layout specifically to their liking. Do you think that you want more storage and less beds; No Problem! These bunkers can be as large or as small as you want. No task is too large for the experts at Rising S!

We employ only the most trustworthy steel workers and welders. Our staff has decades of experience and an intimate understanding of how quality underground Bomb Shelters are constructed. They are like-minded individuals (preppers) that are also preparing their own families for tomorrow. We can not only build the shelter to be safe, but we build it to your exact specifications, making it as comfortable as your living room and as safe as a vault. In a situation that calls for your family to take refuge in a shelter, you don't want to worry about mold, mildew or possible collapse. You want the safest and least problematic shelter, you want the best – you want a Rising S shelter.

## Why Should You Choose A Rising S Bunker?

- *RSC steel bunkers and bomb shelters undergo a stringent quality inspection*
- *RSC steel bunkers and bomb shelters are often times more affordable than other manufacturers*
- *RSC steel bunkers and bomb shelters won't crack during the dry/wet seasons*
