

RESEARCH ENDEAVOURS

OCC's subspecialist ophthalmologists are committed to participating in ongoing research presented nationally and internationally.

Ophthalmology Resident Course
Organized by Dr. Yan, OCC's Glaucoma specialist, Dr. Dan DeAngelis, Oculoplastic surgeon, spent 16 hour dissecting eyes and orbits of cadavers with 42 residents from across Canada.

In Office Assessment of Compliance in Canadian Glaucoma Practices Using the TRAVALERT Dosing Aid
It is a concern when patients are reporting their conformity to dosage requirements, it is often overestimated. The Travopost dosing aid (TRAVALERT) is designed to assist patients in meeting the requirements by using an audible and visual alarm to alert patients when to take their medication.

Studies reveal it has been well received by patients, since it increases patient perception of compliance and total medication reaches the eye while effectively measuring dose requirements.

Stem Cell Transplantation for dry AMD
ASRS, Cannes, Narendra Armogan

Microperimetry analysis to reduce the risk of laser-induced damage to visual functioning in patients with CSME and Extra-foveal Fixation
ASRS, Cannes, Fareed A. Ali

To Whom It May Concern

Dear Sir/Madam,

Re: Deb Bhattacharjee
D.O.B: 03/11/1953
IR No. 37728

Mr. Bhattacharjee is a patient who has diabetic retinopathy and macular edema. He continues to have injections of anti-VEGF medications which are necessary on a four to six weeks basis. He has persistent problems with his retinopathy which requires treatment over the last several years time and will require ongoing regular injections in his eyes to prevent blindness.

If you have any further questions please feel free to contact me directly.

I had a full discussion regarding their diagnosis, prognosis and management plan with the patient and accompanying family member today. An emphasis pertaining to the risks and benefits of recommended therapies was discussed and all questions answered pertaining to such therapies. The need for follow-up and the consequences of failure to follow the recommended plan were discussed in detail. All topics discussed were fully indicated as understood by the patient and accompanying family member. They were also provided with links to our website and pertinent printed materials should they require further information after today's appointment. The patient was informed to contact our office for an urgent appointment if necessary at any time via phone, fax or email.

Thank you.

Narendra Armogan. MD., F.R.C.S. (C)
